

Apex Trigger is Related to Property Object:

```
public static void propMethod(List<
Property__c> propVar){

public class propClass {

    for(Property__c prop:propVar){

        if (prop.Create_Property_
Type__c== 'Residential'){

            prop.Commercial__c='shop
';

        }else{

        }

    }

}

}
```

```
trigger propTrigger on Property__c  
(before update) {  
  
    if(trigger.isUpdate){  
  
        if(trigger.isBefore){  
  
propClass.propMethod(trigger.new);  
  
        }  
  
        }  
  
    }  
}
```
